Career Objective

CS undergraduate with hands-on experience in backend development, relational database design, and API-driven systems, gained through shipping full-stack applications. Comfortable in structured, process-driven environments, translating stakeholder requirements into system workflows and collaborating across distributed teams. Seeking a support/backend engineering role to apply my database, scripting, and problem-solving skills while growing into enterprise-scale operations.

Education

- **B.Tech, Computer Science** — University of Lucknow, Lucknow 2022-2026 CGPA: 7.54
- **Senior Secondary (CBSE)** — Jugal Devi Saraswati Vidya Mandir 2021 74%
- **Secondary (CBSE)** — Jugal Devi Saraswati Vidya Mandir 2019 92%

Experience

- **Northern Railway, Locomotive Workshop** July-Aug 2025
Software Intern Lucknow
 - Led a team of 7-8 members to design a Hostel Management System from scratch for a large-scale government infrastructure environment, gaining direct exposure to enterprise operational constraints.
 - Gathered requirements directly from railway officials and hostel staff, translating operational needs into structured system workflows – an end-to-end, process-driven approach similar to incident/change workflows.
 - Coordinated task distribution across the team, overseeing design, documentation, and prototyping through to final delivery, with emphasis on clear technical documentation.

Projects

- **InkFlow: Blogging Platform** Feb-May 2025
React, Tailwind CSS, PostgreSQL, Node.js, Hono, Cloudflare Workers [Live Demo](#) | [GitHub](#)
 - Architected a full-stack platform with JWT-based authentication, RESTful CRUD APIs, and a normalized PostgreSQL schema, writing and optimizing relational SQL queries for performance.
 - Deployed backend on Cloudflare Workers for edge-level low-latency responses; monitored and maintained CI/CD pipeline for continuous, stable production delivery.
 - Applied clean architecture principles separating data, service, and presentation layers for a modular, debuggable codebase.
- **LearnToCode: Interactive Learning Platform** Oct-Nov 2022
HTML, CSS, JavaScript [Live Demo](#) | [GitHub](#)
 - Built a fully responsive educational web platform from scratch with dynamic content rendering in vanilla JS – no frameworks, no dependencies.
 - Structured with a modular layout system enabling easy addition of new learning modules while maintaining cross-browser consistency.

Technical Leadership and Community

- **Spearheaded Zero's Arena Hackathon** end-to-end – ideation, logistics, and participant onboarding – successfully hosting 200+ developers and fostering a culture of collaborative innovation.
- Mentored junior peers in core web development concepts including DOM manipulation, API integration, and project structuring, helping multiple students deploy their first real-world applications.
- Engaged in peer code reviews promoting clean code practices, proper version control workflows, and team-based development culture.

Technical Skills

- **Database:** PostgreSQL, SQL query writing & optimization, relational schema design **Backend:** Node.js, Express, Hono, RESTful API design
- **Languages:** JavaScript, C, C++ **Frontend:** React, Tailwind CSS, HTML, CSS
- **Tools & Practices:** Git, GitHub, Vercel, Cloudflare, CI/CD, DSA, OOP, DB Design, technical documentation

Achievements and Positions of Responsibility

- **Lead Organizer and Hackathon Founder**, Conceptualized and led Zero's Arena — a university-wide competitive hackathon attracting 200+ participants, overseeing problem curation, team formation, judging, and full event execution 2025
